

ADAS Water Management Policy

Our Aim:

To use water as efficiently as possible.

Our Action:

- Ensuring that whenever possible all water usage at our office locations is metered.
- Ensuring that all items of office equipment requiring water (kettles, dishwashers etc.) are water-efficient and are used as effectively as possible at all times.
- Using water-saving devices in washrooms at our office locations.
- Investigating the potential use of rain-water and grey-water harvesting systems for the washing of machinery and flushing toilets, i.e. where non-potable water can be safely used.
- Ensuring that private water supplies (e.g. from boreholes) for which we are responsible are monitored and tested in accordance with regulatory requirements.
- Only washing equipment when necessary for reasons of safety.
- Using only tap water for in-house and external ADAS-hosted meetings, seminars and conferences.
- Using advice from in-house experts on all aspects of water management.
- Placing water saving stickers and notices at all water usage points in offices.
- Actively encouraging staff to use less water by raising awareness of the need to conserve this important resource.

Performance Monitoring and Reporting:

- Local and central monitoring of metered supplies.
- Achievement of continuing reductions in overall water consumption at office locations.

Water consumption performance will be reported in the company's annual environmental report.

Responsibilities:

We are fully committed to the implementation of this policy, for which I take overall responsibility. We will work with our employees in order to achieve the policy objectives described. The policy is periodically reviewed so that it continues to be effective and relevant to the business.
